

# GPS Module Datasheet

Name: Ultra High Sensitivity and Low Power GPS Receiver Module

Model No.: SKG16BL

Revision: 002

## Revision History:

Revision	Description	Approved	Date
001	Initial Release to 001	George	20120828
002	Update office's address	George	20131120

## General Description

The SKG16BL is a complete GPS engine module that features super sensitivity, ultra low power and small form factor. The GPS signal is applied to the antenna input of module, and a complete serial data message with position, velocity and time information is presented at the serial interface with NMEA protocol or custom protocol.

It is based on the high performance features of the MediaTek MT3337 single-chip architecture, Its -165dBm tracking sensitivity extends positioning coverage into place like urban canyons and dense foliage environment where the GPS was not possible before. The small form factor and low power consumption make the module easy to integrate into portable device like PNDs, mobile phones, cameras and vehicle navigation systems.

## Applications

- LBS (Location Based Service)
- PND (Portable Navigation Device)
- Vehicle navigation system
- Mobile phone

Figure 1: SKG16BL Top View

## Features

- Ultra high sensitivity: -165dBm
- Extremely fast TTFF at low signal level
- Built-in 12 multi-tone active interference canceller
- Ultra low power consumption
- NMEA Output: GGA,GSA,GSV,RMC
- ±10ns high accuracy time pulse (1PPS)
- Advanced Features: AlwaysLocate; AIC
- QZSS、SBAS (WAAS, EGNOS, MSAS, GAGAN)
- UART interface: 4800/9600/38400/115200 bps
- Small form factor: 15.9x13.1x2.2mm
- RoHS compliant (Lead-free)

## Interfaces Configuration

### Power Supply

Regulated power for the SKG16BL is required. The input voltage Vcc should be 3.0V to 4.2V range, current is no less than 100mA. Suitable decoupling must be provided by external decoupling circuitry (10uF and 1uF). It can reduce the Noise from power supply and increase power stability.

Main power supply Vcc current varies according to the processor load and satellite acquisition. Maximum Vcc peak current is about 30 mA during acquisition.

### Backup Battery Power

In case of a power failure on pin Vcc, real-time clock and backup RAM are supplied through pin V\_BCKP. This enables the SKG16BL GPS Receiver to recover from power failure with either a hot start or a warm start (depending on the duration of Vcc outage). If no Backup Battery is connected, the receiver performs a cold start upon powered up. Backup Battery Power V\_BCKP draws typically 7 uA current in backup state.

### RESET

The SKG16BL modules include a RESET pin. Driving RESET low activates a hardware reset of the system. RESET is only an input and will not reset external circuitry. At power down the reset is forced when the Vcc drops below 2.7V.

#### NOTE

If not used, leave RESET not connected (floating).

### Antenna

The SKG16BL GPS receiver is designed for supporting the active antenna or passive antenna connected with pin RF\_IN. The gain of active antenna should be no more than 25dB (18~20dB Typical). The maximum noise figure should be no more than 1.5dB and output impedance is at 50 Ohm.

#### NOTE

With passive antenna keep the cable loss at minimum(<1dB).

### FIXLED

The default FIXLED function is valid fix indicator output. Without a valid fix the signal is at low state; during valid fix condition the signal outputs 50ms pulses every seconds

### UART Ports

There are several function in SKG13B related to UATR communication, such as UART data transmission/receive and NMEA sentences input/output. In general, UART0 is as NMEA output and PMTK command input, UAR1 as RTCM input. The bit rates are selectable from 4800,9600,38400,115200 bps (see table).

Baud rate	Pin18:B4800	Pin16:B115200
9600bps	NC	NC
4800bps	10K pull-down	NC
115200bps	NC	10K pull-down
38400bps	10K pull-down	10K pull-down

### RF\_IN

The transmission line must to be control impedance from RF\_IN pin to the antenna or antenna connector of your

choice. (Impedance 50Ω)

**PPS**

A pulse per second (1 PPS) is an electrical signal that very precisely indicates the start of a second. Depending on the source, properly operating PPS signals have an accuracy ranging 10ns. The PPS signals are used for precise timekeeping and time measurement.

**EINT1**

The default EINT1 function is Standby mode control but the function is not supported; leave signal floating (not connected).

**Advanced Software Features**

**AlwaysLocate™**

AlwaysLocate™ is an intelligent controller of periodic mode. Depending on the environment and motion conditions, GPS module can adaptively adjust working/standby time to achieve balance of positioning accuracy and power consumption. In this mode, the host CPU does not need to control GPS module until the host CPU needs the GPS position data. The following flow chart is an example to make GPS module go into AlwaysLocate™ mode and then back to normal operation mode.

**Embedded Logger function**

The Embedded Logger function don't need host CPU (MCU ) and external flash to handle the operation , GPS Engine will use internal flash (embedded in GPS chipset ) to log the GPS data (Data format : UTC, Latitude , longitude, Valid ,Checksum ), the max log days can up to 2 days under AlwaysLocate™ condition .

**AIC\_Multi-tone active interference canceller**

Because different application (Wi-Fi , GSM/GPRS,3G/4G,Bluetooth )are integrated into navigation system , the harmonic of RF signal will influence the GPS reception , The multi- tone active-interference canceller can reject external RF interference which come from other active components on the main board , to improve the capacity of GPS reception without any needed HW change in the design .SKG16BL can cancel up to 12 independent channel interference continuous wave.

**Performance Specification**

Parameter	Specification	
Receiver Type	L1 frequency band, C/A code, 22 Tracking / 66 Acquisition-Channel	
Sensitivity	Tracking	-165dBm Typical
	Acquisition	-148dBm Typical
Accuracy	Position	3.0m CEP50 without SA(Typical Open Sky)
	Velocity	0.1m/s without SA
	Timing (PPS)	10ns RMS
Acquisition Time	Cold Start	23s(Typical Open Sky)

	Warm Start	23s
	Hot Start	1s
	Re-Acquisition	<1s
Power Consumption	Tracking	18mA @3.3V Typical
	Acquisition	21mA @3.3V
Navigation Data Update Rate	Max 10Hz	Default 1Hz
Operational Limits	Altitude	Max 18,000m
	Velocity	Max 515m/s
	Acceleration	Less than 4g

## Electrical Characteristics

### Absolute Maximum Rating

Parameter	Symbol	Min	Max	Units
<b>Power Supply</b>				
Power Supply Volt.	VCC	-0.3	4.3	V
<b>Input Pins</b>				
Input voltage on any input connection	VIO	-0.3	3.6	V
Backup Battery	V_BCKP	-0.3	4.3	V
RF input power	RF_IN		10	dBm
Human Body Model ESD capability	RF_IN		2000	V
Machine Model ESD capability	RF_IN		100	V
<b>Environment</b>				
Storage Temperature	Tstg	-40	125	°C
Peak Reflow Soldering Temperature <10s	Tpeak		260	°C
Humidity			95	%

**Note:** Absolute maximum ratings are stress ratings only, and functional operation at the maxims is not guaranteed. Stress beyond the limits specified in this table may affect device reliability or cause permanent damage to the device. For functional operating conditions, refer to the operating conditions tables as follow.

The SKG16BL module is Electrostatic Sensitive Device (ESD) and may be damaged with ESD or spike voltage. Although it has built-in ESD protection circuitry at digital I/O, please handle with care to avoid permanent malfunction or performance degradation. Note that RFIN has no ESD protection circuits.

**Note:** The final soldering temperature chosen at the factory depends on additional external factors like choice of soldering paste, size, thickness and properties of the baseboard, etc. Exceeding the maximum soldering temperature in the recommended soldering profile may permanently damage the module.

## Software Protocol

### NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a \$ and with carriage return/line feed. GPS specific messages all start with \$GPxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a checksum, which allows detection of corrupted data transfers.

The Skylab SKG16BL supports the following NMEA-0183 messages: GGA, GSA, GSV, RMC. The module default NMEA-0183 output is set up GGA、GSA、RMC、GSV , and default baud rate is set up 9600bps.

Table 1: NMEA-0183 Output Messages

NMEA Record	Description	Default
GGA	Global positioning system fixed data	Y
GSA	GNSS DOP and active satellites	Y
GSV	GNSS satellites in view	Y
RMC	Recommended minimum specific GNSS data	Y
